

doris::segment\_v2::  
RlePageDecoder::next\_batch

doris::segment\_v2::  
RlePageDecoder::read  
\_by\_rowids

Get

```
graph LR; A["doris::segment_v2::  
RlePageDecoder::next_batch"] --> C[Get]; B["doris::segment_v2::  
RlePageDecoder::read  
_by_rowids"] --> C;
```

The diagram illustrates a data flow where two different methods from the `doris::segment_v2::RlePageDecoder` class are used to trigger a `Get` operation. The first method, `next_batch`, is shown in a box at the top left. The second method, `read_by_rowids`, is shown in a box at the bottom left. Two blue arrows originate from these boxes and point towards a gray box on the right labeled `Get`, indicating that both methods can lead to this operation.
