

doris::ResultBufferMgr
::fetch_data

doris::BufferControlBlock
::get_batch

on_failure

```
graph LR; A[doris::ResultBufferMgr::fetch_data] --> C[on_failure]; B[doris::BufferControlBlock::get_batch] --> C;
```

The diagram illustrates a control flow where two different functions, `doris::ResultBufferMgr::fetch_data` and `doris::BufferControlBlock::get_batch`, both lead to a common `on_failure` handler. The source functions are in white boxes, and the target handler is in a gray box. Blue arrows indicate the direction of the flow from the source functions to the handler.
