

doris::vectorized::
MurmurHash2Impl64::execute
_int_type

doris::vectorized::
MurmurHash2Impl64::execute
_string

murmur_hash2_64

```
graph LR; A[doris::vectorized::MurmurHash2Impl64::execute_int_type] --> C[murmur_hash2_64]; B[doris::vectorized::MurmurHash2Impl64::execute_string] --> C;
```

The diagram illustrates a common code path for two different execution methods. Two boxes on the left represent different overloaded versions of the `execute` method in the `doris::vectorized::MurmurHash2Impl64` namespace. The top box is for integer types (`_int_type`), and the bottom box is for string types (`_string`). Both boxes have a blue arrow pointing to a single gray box on the right labeled `murmur_hash2_64`, indicating that both execution paths eventually call the same underlying implementation.
