

doris::vectorized::
AggregateFunctionDistinctSingle
NumericData::serialize

doris::vectorized::
AggregateFunctionCollectSet
Data::write

write

```
graph LR; A["doris::vectorized::  
AggregateFunctionDistinctSingle  
NumericData::serialize"] --> C[write]; B["doris::vectorized::  
AggregateFunctionCollectSet  
Data::write"] --> C;
```

The diagram illustrates a flow where two different code paths converge on a single 'write' operation. The top path involves a distinct aggregate function serializing numeric data, while the bottom path involves a collect set aggregate function writing data. Both paths are represented by blue arrows pointing to a gray box labeled 'write'.
