string\_to\_uuid

```
graph LR; A["doris::vectorized::FieldVisitorAccurateEquals::operator()"] --> C["string_to_uuid"]; B["doris::vectorized::FieldVisitorAccurateLess::operator()"] --> C;
```

The diagram illustrates a call graph where two distinct function calls, one for an equals operator and one for a less operator, both resolve to the same underlying function, string\_to\_uuid. The source functions are shown in white boxes on the left, and the target function is shown in a grey box on the right. Blue arrows indicate the flow of control from the source functions to the target function.
