

```
doris::FragmentExecState  
::coordinator_callback
```

```
graph LR; A["doris::FragmentExecState  
::coordinator_callback"] --> B["output_files"]
```

A diagram showing a call from a Doris callback function to a function named output\_files. The callback function is represented by a white box with a black border, and output\_files is represented by a gray box with a black border. A blue arrow points from the callback function to output\_files.

output\_files
