advance

```
graph LR; A[doris::vectorized::VerticalMaskMergeliterator::next_batch] --> D[advance]; B[doris::vectorized::VerticalMaskMergeliterator::next_row] --> D; C[doris::vectorized::VerticalMaskMergeliterator::unique_key_next_row] --> D;
```

The diagram illustrates a control flow where three different methods of the `doris::vectorized::VerticalMaskMergeliterator` class call a common `advance` function. The methods are `next_batch`, `next_row`, and `unique_key_next_row`. Each method is represented in a white box with a black border, and the `advance` function is in a gray box. Blue arrows point from each method box to the `advance` box.
