

doris::vectorized::
VOrcWriterWrapper::write

doris::vectorized::
VParquetWriterWrapper
::write

debug_string

```
graph LR; A["doris::vectorized::VOrcWriterWrapper::write"] --> C["debug_string"]; B["doris::vectorized::VParquetWriterWrapper::write"] --> C;
```

The diagram illustrates a data flow where two distinct write operations from the doris::vectorized namespace are directed towards a common debug_string output. The first operation, VOrcWriterWrapper::write, is shown in a white box with a black border. The second operation, VParquetWriterWrapper::write, is also in a white box with a black border. Both boxes have blue arrows pointing to a gray box labeled debug_string on the right.
