

```
greaterOp< doris::vectorized  
::UInt128, doris::vectorized  
::Float32 >
```

```
graph LR; A["greaterOp< doris::vectorized<br/>::UInt128, doris::vectorized<br/>::Float32 >"] --> B[greaterOp]; B --> C[greaterOpTmpl]
```

The diagram illustrates the process of template specialization. It starts with a specific instantiation of the `greaterOp` template for `doris::vectorized::UInt128` and `doris::vectorized::Float32`. This leads to the general `greaterOp` template, which then points to the `greaterOpTmpl` template.

`greaterOp`

`greaterOpTmpl`
