

/Users/dabowang/doris
/be/src/exec/schema_scanner
/schema_schemata_scanner.h

```
graph BT; A["/Users/dabowang/doris<br>/be/src/exec/schema_scanner<br>/schema_schemata_scanner.h"] <--> B["/Users/dabowang/doris<br>/be/src/exec/schema_scanner<br>/schema_schemata_scanner.cpp"]; A <--> C["/Users/dabowang/doris<br>/be/src/exec/schema_scanner<br>/schema_schemata_scanner.cpp"];
```

The diagram illustrates the relationship between a header file and two source files. At the top is a gray box containing the path to the header file: /Users/dabowang/doris/be/src/exec/schema_scanner/schema_schemata_scanner.h. Below it are two white boxes. The left box contains the path to schema_scanner.cpp, and the right box contains the path to schema_schemata_scanner.cpp. Blue arrows point from each of these two source files up to the header file, indicating that both source files include this header.
