release_resource

```
graph LR; A["doris::vectorized::VNestedLoopJoinNode::release_resource"] --> C["release_resource"]; B["doris::vectorized::HashJoinNode::release_resource"] --> C;
```

The diagram illustrates a code refactoring or abstraction process. On the left, two separate boxes represent specific join node classes: 'doris::vectorized::VNestedLoopJoinNode::release_resource' and 'doris::vectorized::HashJoinNode::release_resource'. Blue arrows from both boxes point to a single, shaded box on the right labeled 'release_resource', indicating that the functionality of these two methods is being consolidated into a common, reusable function.
