

doris::ComparisonPredicate
Base::evaluate

doris::InListPredicateBase
::evaluate

current_ordinal

```
graph LR; A[doris::ComparisonPredicateBase::evaluate] --> C[current_ordinal]; B[doris::InListPredicateBase::evaluate] --> C;
```

The diagram illustrates a shared dependency. Two boxes on the left represent different predicate classes: 'doris::ComparisonPredicateBase::evaluate' (top) and 'doris::InListPredicateBase::evaluate' (bottom). Both boxes have a blue arrow pointing from their right side to a single gray box on the right labeled 'current_ordinal'. This indicates that both predicate classes rely on or access the 'current_ordinal' variable during their evaluation process.
