

get\_block

tuple\_desc

doris::DescriptorTbl  
::get\_tuple\_descriptor

```
graph LR; A[get_block] --> B[tuple_desc]; B --> C["doris::DescriptorTbl::get_tuple_descriptor"]
```

The diagram illustrates a three-step process flow. It begins with a gray rectangular box labeled 'get\_block'. A blue arrow points from this box to a white rectangular box labeled 'tuple\_desc'. Another blue arrow points from the 'tuple\_desc' box to a larger white rectangular box containing the text 'doris::DescriptorTbl' on the first line and '::get\_tuple\_descriptor' on the second line. All boxes have a thin black border.
