

doris::BloomFilterColumn
Predicate::evaluate

execute

calculate_filter

```
graph LR; A["doris::BloomFilterColumn  
Predicate::evaluate"] --> C[calculate_filter]; B[execute] --> C;
```

The diagram illustrates a flow where two separate components, 'doris::BloomFilterColumn Predicate::evaluate' and 'execute', both point to a single target component, 'calculate_filter'. The arrows indicate a directed relationship from the left-hand boxes to the right-hand box.
