

/Users/dabowang/doris
/be/src/exec/schema_scanner
/schema_collations_scanner.h

```
graph BT; A["/Users/dabowang/doris  
/be/src/exec/schema_scanner  
/schema_collations_scanner.h"] --> B["/Users/dabowang/doris  
/be/src/exec/schema_scanner  
/schema_collations_scanner.cpp"]; A --> C["/Users/dabowang/doris  
/be/src/exec/schema_scanner  
/schema_collations_scanner.cpp"];
```

The diagram illustrates a file dependency structure. At the top is a gray box containing the path to a header file: /Users/dabowang/doris/be/src/exec/schema_scanner/schema_collations_scanner.h. Below this box are two white boxes, each containing the path to a source file: /Users/dabowang/doris/be/src/exec/schema_scanner/schema_collations_scanner.cpp. Two blue arrows point from the source files up to the header file, indicating that both source files include the header.

/Users/dabowang/doris
/be/src/exec/schema_scanner
/schema_collations_scanner.cpp
