

serialize_keys

```
graph LR; A[serialize_keys] --> B["doris::vectorized::  
serialize_keys_to_pool  
_contiguous"]
```

The diagram illustrates a function call or transformation. On the left, a gray rectangular box contains the text 'serialize_keys'. A blue arrow points from this box to a larger white rectangular box on the right. The white box contains the text 'doris::vectorized::', followed by 'serialize_keys_to_pool' on the next line, and '_contiguous' on the third line. This suggests that the 'serialize_keys' function is being wrapped or transformed into a vectorized version within the 'doris' namespace.

doris::vectorized::
serialize_keys_to_pool
_contiguous
