AggregateFunctionDistinctSingle
NumericData::deserialize

doris::vectorized::
AggregateFunctionCollectSet
Data::read

read

```
graph LR; A["doris::vectorized::  
AggregateFunctionDistinctSingle  
NumericData::deserialize"] --> C[read]; B["doris::vectorized::  
AggregateFunctionCollectSet  
Data::read"] --> C;
```

The diagram illustrates a flow where two distinct code blocks on the left point via blue arrows to a single gray box labeled 'read' on the right. The top block contains code for a distinct aggregate function's deserialize method, while the bottom block contains code for a collect set aggregate function's read method.
