

doris::vectorized::
PageReader::get_page_data

doris::vectorized::
PageReader::next_page
_header

read_bytes

```
graph LR; A["doris::vectorized::  
PageReader::get_page_data"] --> C["read_bytes"]; B["doris::vectorized::  
PageReader::next_page  
_header"] --> C;
```

The diagram illustrates a data flow where two separate functions, 'doris::vectorized::PageReader::get_page_data' and 'doris::vectorized::PageReader::next_page_header', both contribute to a single output labeled 'read_bytes'. The functions are represented in white boxes on the left, and the output is in a gray box on the right. Blue arrows indicate the direction of the flow from each function to the output.
