

doris::vectorized::
AggregateJavaUdafData
::init_udaf

doris::vectorized::
JdbcConnector::open

doris::vectorized::
JavaFunctionCall::prepare

SerializeThriftMsg

```
graph LR; A["doris::vectorized::AggregateJavaUdafData::init_udaf"] --> D["SerializeThriftMsg"]; B["doris::vectorized::JdbcConnector::open"] --> D; C["doris::vectorized::JavaFunctionCall::prepare"] --> D;
```

The diagram illustrates a flow where three different functions from the doris::vectorized namespace are serialized into a Thrift message. The functions are: AggregateJavaUdafData::init_udaf, JdbcConnector::open, and JavaFunctionCall::prepare. All three have arrows pointing to a single box labeled SerializeThriftMsg.
