NullBitmapBuilder::finish

doris::segment_v2::
RlePageBuilder::finish

Flush

```
graph LR; A["doris::segment_v2::  
NullBitmapBuilder::finish"] --> C[Flush]; B["doris::segment_v2::  
RlePageBuilder::finish"] --> C;
```

The diagram illustrates a control flow where two distinct finish methods from the `doris::segment_v2` namespace converge on a single `Flush` operation. The first method, `NullBitmapBuilder::finish`, and the second, `RlePageBuilder::finish`, both trigger the `Flush` process, which is represented by a gray rectangular box on the right. Blue arrows indicate the direction of the flow from the finish methods to the flush operation.
