

doris::stream\_load  
::VNodeChannel::add\_block

doris::stream\_load  
::VOlapTableSink::prepare

load\_job\_id

```
graph LR; A["doris::stream_load<br/>::VNodeChannel::add_block"] --> C["load_job_id"]; B["doris::stream_load<br/>::VOlapTableSink::prepare"] --> C;
```

The diagram illustrates a data flow where two different components of the doris::stream\_load module contribute to a single load\_job\_id. The top component, VNodeChannel::add\_block, and the bottom component, VOlapTableSink::prepare, both have arrows pointing to the load\_job\_id box.
