

doris::CpuInfo::verify  
\_performance\_governor

doris::CpuInfo::verify  
\_turbo\_disabled

WarnIfFileNotEqual

```
graph LR; A[doris::CpuInfo::verify_performance_governor] --> C[WarnIfFileNotEqual]; B[doris::CpuInfo::verify_turbo_disabled] --> C;
```

The diagram illustrates a code refactoring or dependency analysis. Two source functions, `doris::CpuInfo::verify_performance_governor` and `doris::CpuInfo::verify_turbo_disabled`, are shown in white boxes on the left. Blue arrows point from each of these source functions to a single target function, `WarnIfFileNotEqual`, which is shown in a gray box on the right. This indicates that both source functions utilize the `WarnIfFileNotEqual` utility.
