

doris::vectorized::
AggregateJavaUdafData
::init_udaf

doris::vectorized::
JdbcConnector::open

doris::vectorized::
JavaFunctionCall::prepare

push

```
graph LR; A["doris::vectorized::AggregateJavaUdafData::init_udaf"] --> D["push"]; B["doris::vectorized::JdbcConnector::open"] --> D; C["doris::vectorized::JavaFunctionCall::prepare"] --> D;
```

The diagram illustrates a data flow where three distinct operations from the doris::vectorized namespace converge on a single 'push' operation. The operations are: 'AggregateJavaUdafData::init_udaf', 'JdbcConnector::open', and 'JavaFunctionCall::prepare'. Each operation is contained within a white rectangular box with a black border. Three blue arrows originate from the right side of these boxes and point towards a gray rectangular box labeled 'push' on the right.
