

doris::VSchemaChangeDirectly
::_inner_process

doris::VSchemaChangeWith
Sorting::_inner_process

change_block

```
graph LR; A[doris::VSchemaChangeDirectly::_inner_process] --> C[change_block]; B[doris::VSchemaChangeWithSorting::_inner_process] --> C;
```

The diagram illustrates a flow where two different processing methods, 'doris::VSchemaChangeDirectly::_inner_process' and 'doris::VSchemaChangeWithSorting::_inner_process', both feed into a single 'change_block' component. The first two boxes are white with black borders, while the 'change_block' box is gray with a black border. Blue arrows indicate the direction of the flow from left to right.
