

doris::vectorized::  
StX::execute

doris::vectorized::  
StY::execute

decode\_from

```
graph LR; A[doris::vectorized::StX::execute] --> D[decode_from]; B[doris::vectorized::StY::execute] --> D;
```

The diagram illustrates a data flow where two separate execution paths, one for StX and one for StY, both feed into a common 'decode\_from' operation. The source boxes are white with black text, while the destination box is gray with black text. Blue arrows indicate the direction of the flow from left to right.
