

/Users/dabowang/doris
/be/src/olap/rowset/unique
_rowset_id_generator.h

```
graph BT; A["/Users/dabowang/doris  
/be/src/olap/rowset/unique  
_rowset_id_generator.h"] --> B["/Users/dabowang/doris  
/be/src/olap/rowset/unique  
_rowset_id_generator.cpp"]; A --> C["/Users/dabowang/doris  
/be/src/olap/storage  
_engine.cpp"];
```

This diagram illustrates the inclusion relationships between three source files in the Doris codebase. At the top is a header file, `_rowset_id_generator.h`, which is included by two other files: `_rowset_id_generator.cpp` and `_engine.cpp`. The header file box is shaded gray, while the source files are white. Blue arrows point from the source files to the header file.
