

doris::ObjectVal::find

doris::JsonbUpdater
::pushPathKey

value

```
graph LR; A[doris::ObjectVal::find] --> C[value]; B[doris::JsonbUpdater::pushPathKey] --> C;
```

The diagram illustrates a data flow where two distinct operations, 'doris::ObjectVal::find' and 'doris::JsonbUpdater::pushPathKey', both contribute to or result in a common 'value'. This is represented by two light blue arrows originating from the left and pointing towards a gray rectangular box on the right labeled 'value'.
